

Advanced Job Scheduling Built for JD Edwards

Smart Scheduler has been made to meet the unique needs of EnterpriseOne customers. Built within the standard JD Edwards toolset & interface, Smart Scheduler provides easy set-up, little maintenance & a seamless user experience. We are constantly expanding and tailoring our road map to meet the unique needs of JD Edwards customers.

Why Smart Scheduler?

- ✓ Consistent look and feel with JDE allows easy implementation, training and daily operation
- ✓ No additional hardware required
- ✓ Advanced features that customers love with more in the roadmap
- ✓ Cost to Value
- ✓ Lower overtime and employee lost time

Challenges before Smart Scheduler...

- ✓ Required to use Single Stream to control job execution
- ✓ Buildup of jobs in queue from scheduler slow/shutdown
- ✓ Poor usage of server resources
- ✓ Difficult to monitor, especially in off hours
- ✓ Alternatives with non-JDE schedulers available are cost prohibitive

Oracle Validated Integration

Through the Oracle Partner Network, partners with validated integrations provide customers with standards-based product integrations, tested & validated by Oracle. Customers benefit from improved risk management and smoother upgrade capability, leading to a lower total cost of ownership & greater overall satisfaction.

ORACLE®

Validated Integration

JD Edwards
EnterpriseOne

Why customers love Smart Scheduler:

- **Easy to Use.** No training required, same look and feel as your current JDE.
- **Feature Rich.** Solving countless problems & ever-more functionality in development.
- **References.** From Enterprise to SMB companies. Wide range of industries.
- **Integrity.** We stand behind our promises.
- **Customer Focused.** Customer recommendations are added to published software for us to support.

"This solves all of my problems and a few that I didn't even know that I had!"

Jeremy, CNC Administrator
